Professional Summary

Full-Stack Developer and AI Engineer experienced in building production-ready web apps with React, Node.js, and Flask. Skilled in designing end-to-end ML pipelines focused on Neural Networks, Transformers, and Generative AI, and architecting AI workflows using LangChain, and RAG to integrate LLMs into real-world applications. Passionate about merging robust backend systems with cutting-edge AI for scalable, impactful solutions.

Projects

Transcriptor.AI – A browser extension for meet transcription and smart query [\[GITHUB\]](#)

Tech Stack :- *React.js, Node.js, express.js, RAG, langgraph, vector database, postgres, tailwind-css, redis, Docker*

- Built a full-stack browser extension for live meeting transcription and natural language querying, with real-time caption capture and processing from Google Meet
- Designed a backend implementing a self-correcting Retrieval-Augmented Generation (RAG) pipeline orchestrated with LangGraph, integrated with ChromaDB for semantic search and vector-based retrieval over meeting transcripts
- Built a companion React.js dashboard delivering post-meeting analytics, query history, and personalized insights
- Containerized the application using Docker across multiple microservices and implemented PostgreSQL database migrations for schema versioning; integrated Redis for caching to optimize query performance and reduce latency

Attendance.AI – Smart Attendance management application [\[GITHUB\]](#)

Tech Stack :- *OpenCV, face_recognition, node.js, react.js, flask, postgres, tauri, zustand, Docker, Microservices*

- Built a full-stack attendance automation platform using facial recognition to eliminate manual attendance tracking, accessible via web app and desktop app (Tauri)
- Developed a Python microservice using the face_recognition library and deployed via Flask for real-time AI-based student identification through the browser
- Built a Node.js/Express.js REST API backend with JWT-based authentication and authorization, managing student, class, and subject data
- Designed a normalized PostgreSQL database schema for users, classes, students, and attendance records, supporting efficient querying and analysis
- Implemented a microservices architecture by decoupling the AI/ML service (Python/Flask) from the core backend (Node.js/Express), improving scalability, fault isolation, and maintainability

Handwritten Digit Recognition – Neural Network Model to Recognise Handwritten Digit [\[GITHUB\]](#)

Tech Stack:- *CNN, Neural Networks, pytorch, react.js, tailwind-css, flask,*

- Built a full-stack handwritten digit recognition app using a **CNN trained on the MNIST dataset**, allowing users to draw or upload digits for real-time prediction
- Developed a Flask backend with **PyTorch** for model inference, including an **image pre-processing pipeline** (grayscale conversion, resizing, normalization) to match **MNIST** format
- Created a React frontend with canvas drawing and file upload support, integrated with a REST API for instant digit predictions

Education

- Masters of Computer Applications, USICT, GGSIPU, New Delhi | Expected 2027 | 9.04/10
- Bachelors of Science (Computer Science), B.S.A. College, Mathura | 2025 | 8.11/10

Skills

- **Languages:** JavaScript, Python, Java
- **Frontend:** React.js, Redux, HTML5, CSS3, Tailwind CSS, Framer Motion
- **Backend:** Node.js, Express.js, Flask, REST APIs, WebSockets, PostgreSQL, MySQL
- **AI & ML:** ML, DL, scikit-learn, pytorch, Generative AI, LLMs, Transformers, Langchain, RAG, ollama
- **Tools:** Docker, Git, GitHub, Postman, VS Code, Vercel, Railways, Render.
- **Core CS:** DSA, OOP's, Operating Systems, DBMS, Networking.

Certificates and Achievements

- Secured 1st place at the Code Avengers competitive programming event organized by BVICAM College.
- Reached the finals of HackForDelhi, a prestigious hackathon hosted by the Delhi Government
- **Certification** – **Samsung Innovation Campus** AI & ML course certificate
- **Certification** – Udemy “Full Stack Web Development Bootcamp”
